

Kim Seulgi
Artificial Intelligence Engineering Student

Email: ksg040324@chosun.ac.kr
GitHub: github.com/ksg20243324
GPA: 4.239 / 4.5

Professional Summary

Artificial Intelligence Engineering student at Chosun University with interests in Computer Vision, Vision-Language Models, Natural Language Processing, and Data Analysis. Experienced in AI research, competition participation, and practical machine learning projects.

Education

Chosun University
Department of Artificial Intelligence Engineering
2024.03 ~ Present (3rd Year)
Relevant Coursework: Machine Learning, Deep Learning, Data Structures, Computer Vision, Signals and Systems

Technical Skills

Programming	Python (Intermediate), C/C++, JavaScript
AI / ML	PyTorch, scikit-learn, Deep Learning, Computer Vision, VLM
Tools	Git, GitHub, VS Code, Google Colab

Projects

- Vision-Language Model Hallucination Mitigation Research**
Developed detector-guided prompting and rule-checking methods to reduce object and spatial hallucinations in VLMs using Qwen2.5-VL, YOLOv11, COCO, and GQA.
- Sentiment Analysis Research**
Performed text preprocessing, sentiment classification, and comparative model analysis using NLP techniques.
- DACON AI Competition**
Participated in AI competitions involving data analysis, model experimentation, and performance evaluation.

Experience

- AI Lab Undergraduate Intern
- Club Activities and Team Projects
- AI Digital Media Individual Project

Career Goal

AI Developer • Computer Vision Engineer • Data Scientist • AI Researcher
